

Cyber Tabletop Exercise

An event-driven cyber crisis simulation exercise where key Cyber Incident Response Team (CIRT) members of an organization assemble in a semi-formal, boardroom setting to discuss their roles and actions during a cyber-related emergency, and as such practice an optimal response to a cyber crisis situation.

ORNA's expert facilitators guide the participants through a bespoke scenario crafted beforehand based on threats and risks particular to your industry, providing action triggers ("injects"), benchmarking and decision-making assistance where needed.

UP TO 20 PARTICIPANTS
2-4 HOURS
ONLINE OR IN-PERSON

Register now! Go to www.orna.app/solutions or chat with our **Special Advisory Services (SAS)** team to book this workshop.
Limited slots available.

PRACTICE MAKES PERFECT

Performing a Cyber Tabletop Exercise is a **crucial component of an effective Cyber Incident Response program**, as even the most well-planned processes can fail in a high-stress situation if not practiced regularly, or are unknown to the key participants.

Discussion

Discuss the following points among the CIRT members present, and align a decision is needed, try to determine who is responsible for making such a decision, and who needs to be informed (hint: use the RACI tables in the IRP).

BENEFITS

Minimizing ad-hoc actions with the ultimate goals of reducing liability, maintaining public image, retaining customers and containing long- and short-term incident-related costs.

Cyber Incident Response Team gains or improves practical, hands-on knowledge on exactly how to identify, escalate and resolve cyber incidents based on real-world scenarios.

Auxiliary teams (Legal, Finance, Comms, HR) gain a clear view of their involvement in the resolution of cyber incidents, and practice cross-functional collaboration.

Business Stakeholders gain precise practical knowledge on how to handle a cyber crisis while minimizing damage to the business and fulfilling regulatory obligations.
